**“Splice-Guard” Telephone Cable Splice Rehabilitation Compound:** This new one-part compound never hardens, will not freeze at 40-degrees below zero, will not melt even if on fire, will allow future splice re-entry with ease, and can be reused when the entered splice is closed. Splice-Guard’s ability to turn water into a rubbery material provides power and telephone cable splices that are 100% waterproof to any water intrusion and automatically will restore the water-shortened non-performing conductors in telephone splices back to good condition for telephone service.

**Corrosion Guard:** This new technology spray will not allow rust to form on metal surfaces. It accomplishes this by depositing a positive magnetic field to the surface of the metal, which prevents the negative metallic-ions from being drawn by the positive valent H<sub>2</sub>O molecule into water to form rust. The metallic ions are no longer drawn into water for their valent need is now satisfied by being against the positive magnetic field that was deposited on the metal by Corrosion Guard. And with no metallic-ion transfer, there is “No More Rust”.

**Hydro-Block:** This patented conduit-filling compound is a soft composition that never hardens, freeze at 40-degrees below zero, or melt even if on fire. Designed for easy injection into electrical conduits from calking tubes or five-gallon pails. Hydro-Block prevents water from passing through conduits by bonding to the H<sub>2</sub>O molecules, which turns the water into a rubbery material that seals the conduit against any further water passage. Hydro-Block seals aboveground and underground conduits and prevents the passage of water into control panels; pad mounted transformers; connection boxes; motor controls; and electrical systems.

**WaterGuard Desiccant Bags:** These patented Atmospheric Desiccant Bags will remove both liquid water and water vapor from the enclosed air within instrument cases, motor-controls, electrical panels, and wire connection boxes. This product attracts and bonds to the H<sub>2</sub>O molecule and will dry the atmosphere of an enclosed space to below the dew point, preventing the formation of condensate, rust, corrosion, and electrical shorts that results from the traditional condensate moisture that forms within these enclosed type systems.

**WaterGuard Filters:** These new technology patent-pending filters will remove even the emulsified water that forms in hydraulic oil, lubricating oil, transformer oil, gear oil, gasoline, diesel fuel and compressed air and they can also remove water from alcohol-blended gasoline, which is something no other filter is reported able to do. With these new technology filters on your customer’s equipment or fuel dispenser’s, there will be no water to cause damage, down time, trouble, or maintenance expense in their equipment, or water or phase separated alcohol dispensed into a customer’s car.

**WaterGuard Portable Filtering Systems:** WaterGuard Portable Filter Buggies are the heaviest duty made and with WaterGuard’s new technology filters can remove solids to ½ microns and even emulsified water from hydraulic oil, lubricating oil, gasoline, diesel fuel, and transformer oil, tanks and reservoirs. They can remove water from E-85 alcohol-blended gasolines and restore dielectric strength transformer oils while the transformer remains in the substation or on the pole. WaterGuard’s 30-GPM Portable Filtration Systems were designed to service large reservoirs and transformers while the 2-GPM unit can clean small reservoirs and restore dielectric strength to transformer oil while the transformer stays on the pole.

**WaterGuard Thread Lube:** This new technology thread lubricant stops threaded metal conduits and nut and bolt assemblies from rusting together. It blocks the metallic-ion transfer that forms the rust that develops when water enters the threads of threaded metal connections. This product is superior to any other thread lubricant on the market and uses the same technology to block metallic-ion transfer as our Corrosion Guard products.
