

## Assembled Kits

# Manage Work, Not Parts

## Streamline ordering. Maximize efficiency.

Do you spend too much time buying and assembling sub-components to make them jobsite ready? Summit can help. With Assembled Kits, you can bundle multiple SKUs into a single kit, which Summit can assemble and have ready when you place your order.

- **Streamline Order Management** – Instead of managing five parts with five different part numbers, Summit's Assembled Kits can build those items into one product, with one part number. This reduces order entry errors, consolidates shipments, and simplifies billing activity.
- **Reduce Prep Time** – Assembled Kits reduce non-value added labor costs because your items are ready to use when delivered. Don't spend your time putting parts together.
- **Configured to Your Needs** – Your project is unique. Your requirements are specific. Summit's Assembled Kits are tailored to your specifications so you can be confident you'll have the right product at the right time. Summit can even include custom labels and instruction sheets for your Assembled Kits.

See what Summit's Quick Labels can do for your projects. Call your local Summit Account Manager or email [solutions@summit.com](mailto:solutions@summit.com) today to get started.

### Tailored Solutions That:

Streamlines Ordering

Simplifies Inventory

Reduces Labor Costs

Increases Control

Maximizes Efficiency
